

// neurowellness and readiness, for the 1 september restart

Round 2 • Two Cold Streams

Round 2 • Two cold streams

v1.9 • 14 August 2026. For the ad restart on **Monday 1 September**. Round 1 is archived.

01 Why Round 1 is archived rather than continued

Round 1 was built four-patterns-equal, before we had looked properly at who is actually in the database. Three problems, none of them about the craft:

1. **Insulin drift was one of the four live ads.** Insulin is **one in twenty-five** of the profiles we have run. A quarter of the spend was aimed at four per cent of the audience.
2. **Nothing in the pack was about sleep or stress load** — the two worst-scoring sections we measure, and now the biggest lane.
3. **Everything routed to** `/challenge` . Fourteen days is a large first ask of a stranger.

The formula is unchanged and still correct: **pattern interrupt + burning intrigue + specific benefit**. Only the aim has moved.

02 The destination • the Challenge LP

Both streams land on `/challenge` . The flow, confirmed 14 Aug 2026:

ad click → **Challenge landing page** → sign up → welcome email with portal access → **the scorecard is the first thing inside the portal**

So the scorecard **is** the first gate. It sits after the signup rather than in front of it, and that order is deliberate: name, email and phone are captured **before** any gate, so someone who stalls at the scorecard is still a lead we can chase. On a scorecard-first route they would leave nothing behind, because the public scorecard only asks for contact details after all five sections are answered.

The public `/scorecard` page stays the **warm and organic** front door. Cold paid and the gym-floor QR go direct to the Challenge, per the locked routing rule.

03 Stream A · Neurowellness

The lane. Sleep, stress load, regulation. The biggest one. **The proof.** Across **86 completed scorecards**, Sleep (1.80) and Stress Load (1.86) are the two worst-scoring sections. Training Response (2.06) is the best. **The argument.** Capacity is fine. Regulation is gone.

A1 · The wrong one

Headline > Training scored highest. Sleep scored lowest. Guess which one your plan adds more of

Primary text > You train three or four times a week. > > You eat well most days. > > And you sleep badly, and have done for years, and not one person has ever asked you about it. > > We have now scored 86 women on five things. Energy, sleep, stress, how they respond to training, and how they respond to fat loss. > > Training came out the best of the five. > > Sleep came out the worst. > > So the thing this group works hardest at is the thing least wrong with them. And the thing most wrong has never once been looked at. > > Then they get handed a plan that starts by adding more training.> > The free 14-Day Body Decode Challenge. No payment, no card, nothing to cancel. > > Day 1 scores five things and shows you where you actually are. You get a training plan, a nutrition guide and a short daily note in your portal. Day 7 scores eight markers against day one. Day 14 names which of the four patterns is driving yours. > > It is genuinely free, and it starts the day you join.

Link description · Five things scored. Most people are surprised by which one comes last.

A2 · Four in ten

Headline > You did not come here about sleep. It is the one that scores worst anyway

Primary text > You did not come here about sleep. > > You came because the fat will not move. Because a plan that used to work has stopped working. Because your body used to respond and now it does not. > > Then we score you, and sleep comes out bottom of the five. > > Not "a bit tired". Awake at 2am. Lying there doing sums. Up at 6 feeling like you never went to bed. > > Here is why that matters more than the training. > > Your body does not change during the session. It changes overnight. The session asks for the change. Sleep is when your body actually makes it. > > Train hard on four hours of broken sleep and you are not building anything. You are just adding one more thing to recover from. > > Of the 86 women we have scored, nearly four in ten came out at the bottom on sleep. Almost none of them came to us about it.> > The free 14-Day Body Decode Challenge. No payment, no card, nothing to cancel. > > Day 1 scores five things and shows you where you actually are. You get a training plan, a nutrition guide and a short daily note in your portal. Day 7 scores eight markers against day one. Day 14 names which of the four patterns is driving yours. > > It is genuinely free, and it starts the day you join.

Link description · The one nobody assessed.

A3 · Under-recovering

Headline > Two women, same complaint. One needs to train more, one needs to stop

Primary text > Two women walk in with the same complaint. > > Tired all the time. Sessions feel flat. Body will not change. > > One of them genuinely needs to do more. > > The other is doing too much already, and every extra session is making it worse. > > From the outside they are identical. Same words, same frustration, same effort. > > That is why the woman training hardest in any group is so often the one getting the least back. > > You cannot work out which one you are by trying harder. Trying harder is what both of them are already doing. > > The free 14-Day Body Decode Challenge. No payment, no card, nothing to cancel. > > Day 1 scores five things and shows you where you actually are. You get a training plan, a nutrition guide and a short daily note in your portal. Day 7 scores eight markers against day one. Day 14 names which of the four patterns is driving yours. > > It is genuinely free, and it starts the day you join.

Link description · Two things that look the same from outside.

04 Stream B · Readiness

The lane. Can this body take the load today. The frame, not a topic. **The proof.** Of **88 people**, only **18% came out Ready**. Half came out Transitioning. **The argument.** Everyone measures what you did. Almost nobody measures what you could survive.

B1 · Eighteen per cent

Headline > 88 women assessed. 18 in every 100 were ready for a hard plan. The rest got one anyway

Primary text > You are doing everything right and it is not showing up. > > We have now assessed 88 women. Only 18 in every 100 came out ready for a hard training plan. > > Everyone else got one anyway. > > That is how plans are written. They assume a body that can take the work. Then the same programme goes to the woman who can take it and the woman who cannot, and only one of them gets a result. > > Half of the women we assess come out in the middle. Not wrecked, not ready. Doing everything right and waiting for it to show up. > > Give a hard plan to a body that cannot take it yet and it does not half work. You go backwards. Then you decide the problem was you. > > It usually was not. > > The free 14-Day Body Decode Challenge. No payment, no card, nothing to cancel. > > Day 1 scores five things and shows you where you actually are. You get a training plan, a nutrition guide and a short daily note in your portal. Day 7 scores eight markers against day one. Day 14 names which of the four patterns is driving yours. > > It is genuinely free, and it starts the day you join.

Link description · Most people are not in the group they think.

B2 · The wrong question

Headline > Every plan asks how hard you can go. Nobody asks whether your body can take it

Primary text > You are willing to work hard. That was never the problem. > > Every plan asks how hard you can go. Nobody asks whether your body can take it right now. > > What changes week to week is what your body can actually absorb. After a bad run of sleep. After a stressful few months. After the last couple of years you have had. > > Push a body that cannot absorb it and it does not get fitter. > > It holds on to fat. It holds on to fluid. It stops giving you sessions. > > And because the effort went up and nothing changed, you assume you need to push harder still. > > The free 14-Day Body Decode Challenge. No payment, no card, nothing to cancel. > > Day 1 scores five things and shows you where you actually are. You get a training plan, a nutrition guide and a short daily note in your portal. Day 7 scores eight markers against day one. Day 14 names which of the four patterns is driving yours. > > It is genuinely free, and it starts the day you join.

Link description · The question nobody asks first.

B3 · Eight weeks away

Headline > The plan you keep starting and quitting might be a good plan. It might just be early

Primary text > You have started this plan before. > > Maybe twice. It worked for a fortnight, and then it did not. > > Here is the part almost nobody says out loud, because there is no money in telling someone to wait. > > It might be a good plan. It might just be too early for you. > > There is a version of you it would work brilliantly for. She sleeps through. Her energy holds past 3pm. She is about eight weeks away. > > Give the same woman the same programme two months later, after the thing underneath has been sorted out, and it does exactly what it was meant to do the first time. > > So the first question was never what to do. It was what your body can take right now. > > The free 14-Day Body Decode Challenge. No payment, no card, nothing to cancel. > > Day 1 scores five things and shows you where you actually are. You get a training plan, a nutrition guide and a short daily note in your portal. Day 7 scores eight markers against day one. Day 14 names which of the four patterns is driving yours. > > It is genuinely free, and it starts the day you join.

Link description · Not wrong. Early.

05 The one metabolic ad · run it, but only one

Per the airtime rule this is one in ten, and it works as a **disqualifier** rather than a claim.

M1 · One in twenty-five

Headline > The internet says your problem is insulin. In the women we assess it is about one in 25

Primary text > You have been told your problem is insulin. > > Cut the carbs. Skip breakfast. Fast for sixteen hours. > > In the women we assess, insulin is about one in twenty-five. > > The other twenty-four are doing everything the insulin advice says, for a problem they do not have. > > Insulin is real. When it is the one driving things, cutting the load works, and it works quickly. > > It is just not what is going on in most women over 40. > > There are four things that do this. One of them is yours, and aiming at the wrong one is how you lose a year.> > The free 14-Day Body Decode Challenge. No payment, no card, nothing to cancel. > > Day 1 scores five things and shows you where you actually are. You get a training plan, a nutrition guide and a short daily note in your portal. Day 7 scores eight markers against day one. Day 14 names which of the four patterns is driving yours. > > It is genuinely free, and it starts the day you join.

Link description · Probably not the one you were told.

06 The creative system · unchanged from Round 1

The visual system **is** the high-dopamine strategy, not decoration around it. Round 2 wears the same clothes; only the aim moved. Every ad carries all seven parts:

PART	WHAT IT DOES
Photo	A real greyscale human in a real gym, so the frame does not read as an ad in the half-second before anyone decides.
Artifact	A product screen floating over the photo. The highest-value element in the system — it is proof, it is unfamiliar, and it is the thing the eye stops on. A different one in every ad.
Tags	Blue + white pair, lower left.
Rule	4px blue, separating image from argument.
Strap	Headline with exactly one blue emphasis phrase, plus a grey subline.
Ticker	Blue marquee.
Offer bar	Free / no payment, so the price objection dies inside the image.

Two arrangements, both carried over: **NEWS** (full-bleed photo, artifact upper right, strap beneath) and **SPLIT** (blue offer banner on top, white product card left, photo and headline right). A1 and B1 are SPLIT; the rest are NEWS.

The offer bar is unchanged because the destination is: *Free · 14-Day Body Decode Challenge*, unchanged. “Decode” is the locked product term for paid cold ads; “readiness” is the category the tag pair carries.

The offer zone carries the benefit, not just the product name. It used to read *Free · 14-Day Body Decode Challenge over Find your pattern in 14 days*. To a stranger that is two phrases they have never heard and a price. Pattern interrupt and burning intrigue were both strong; **the third leg of the formula — a specific benefit — was carried by nothing**, and that is also the leg that lets the algorithm find the right people.

It now reads: *Day 1 scores where you actually are. Training plan, nutrition guide, daily coaching*. Set in sentence case, not tracked-out caps, because it is the one part of the image meant to be **read** rather than scanned.

This costs no dopamine, because intrigue and clarity live in different zones. The strap carries the curiosity gap, the offer bar carries what you get. Making the bar plainer never touches the hook. The

ticker stays pure brand on purpose: a news ticker repeating a name is what makes the frame read as a broadcast rather than an ad, and filling it with offer language would undo the interrupt the whole system exists to create.

SPLIT layout rebalanced (A1, B1). It centred a ~730px content block in a ~1250px frame, so roughly 190px of dead black sat above *and* below and the composition had nothing anchoring it. Fixed without inventing content: the photo is much taller (a bigger photo is a better pattern interrupt anyway), the card rows breathe, and the card gained a footer explaining what the numbers mean — a stranger previously saw 1.80 /3 with no idea what good looks like. The score disc was also using `align-items:baseline`, which does no vertical centring at all, so the number sat high in its ring.

Type rebuilt to the mobile floor (v1.9). A 4:5 post renders about 430px wide on a phone against our 1080px canvas, so everything scales by roughly **0.4**. The artifact panel was running **11 to 16px** — four to six pixels on a phone. The proof element of the entire system, and nobody could read a word of it. **29 of 37 type declarations were under the floor.**

Everything is now at or above **30px**, per the locked scale: body 39, list rows 34-36, captions and notes 30-32, kickers 32, footer benefit 34. The panel had to grow from 344px to 660px to hold it, so it covers more of the photo. That is the right trade — the artifact is the thing the eye stops on.

The SPLIT arrangement changed as a consequence. Its headline lived in a ~400px side column, which capped it at a size nobody could read and forced every SPLIT headline to be four words long. The card and photo now sit side by side above the **same full-width lower third the NEWS arrangement uses**, so the two arrangements differ only in their top zone and every headline gets the full width. SPLIT's blue top banner went with it: once it inherited the shared footer, it was carrying the offer twice.

This defect is inherited, not new. `build_ad4.py` and `build_ad5.py` — the Round 1 builders this system came from — carry the same 11-25px type. Anything rebuilt from them needs the same pass.

Photos: five of seven show a woman, matching a 93% female audience. Kade carries the two authority ads (B3 and M1) where the claim is "in the women we assess".

Build: `_creative_build/build_round2.py` → `public/creative/round2/`.

07 Structure and budget

Same stage gate as Round 1, because the reasoning has not changed: Meta cannot optimise at \$7-10/day per ad set.

Phase 1, weeks 1-2	\$25/day, Stream A only. A1, A2, A3 running inside the one ad set so creative tests in parallel. Stream B and M1 created but PAUSED.
Gate	CPL against target at the end of week 2. Hit → Phase 2. Miss → debug Stream A, do not expand.
Phase 2, weeks 3-4	\$75/day. Unpause Stream B and the metabolic ad.

Stream A goes first because it is the biggest lane and carries the strongest proof we own.

Objective: Lead, not CompleteRegistration. **Targeting:** broad. **CTA:** Learn More. **Destination:** /challenge .

08 Pre-flight checklist

Unchanged from Round 1. Run it on every ad at the moment of upload.

- ☐ Image interrupts the pattern
- ☐ Headline creates a curiosity gap that only clicking closes
- ☐ A specific benefit is present so the algorithm can find the right people
- ☐ Lead-in copy earns the "see more" tap
- ☐ Readability grade 5 or below
- ☐ Under 2,200 characters
- ☐ Heavy line breaks, one idea per line
- ☐ Specific numbers, not vague claims
- ☐ Positive framing leads
- ☐ Link description is intriguing, not descriptive
- ☐ CTA button set to Learn More
- ☐ Creative, headline and copy all on one theme
- ☐ Does not look like an ad

09 Numbers rule

n=86 and n=88 are quotable exactly. They are the strongest thing we own and the entire positioning is "they cite, we measure."

n=27 numbers are ratios only — roughly half, about a third, one in twenty-five. The pattern split is 13/10/3/1 out of 27 people and a decimal will move. Re-run `scripts/state-of-the-data.ts` before upload and correct anything that has drifted.
