

14-DAY BODY DECODE CHALLENGE

NUTRITION GUIDE

RESET. REALIGN. REBUILD.

BODY RECODE™

This training plan is designed to calm your system, rebuild structure, and reduce the daily friction that makes your body feel harder to manage than it should. The sessions are simple by design, helping ease tension, stabilise your energy, and bring you back into a predictable rhythm. Over these fourteen days, your goal is not intensity. Your goal is to move in a way that supports clearer mornings, steadier afternoons, and a gradual return to feeling more like yourself again.

WHAT HABPS IS

HABPS stands for Hybrid Animal Based Performance System. It blends the nutrient density of animal based eating with the strategic use of clean carbohydrates to support training, recovery, and performance.

This guide keeps things simple for fourteen days:

Protein and healthy
fats anchor every
meal

Fruit provides
your daily
carbohydrates

Clean carbs are
added after
training only

Meals are repeatable,
simple, and digestion
friendly

HABPS is not restrictive. It is structured, supportive, and designed to stabilise hunger, improve energy, and support a leaner, stronger body.

Animal Based Foundations

Your base comes from high quality animal foods.

Protein sources:

Beef, chicken, eggs, seafood, pork, lamb, yoghurt, cottage cheese.

Primary fats:

Butter, ghee, coconut oil, avocado, cheese, egg yolks.

Fruit:

Any fruit you enjoy. Fruit is your carbohydrate foundation.

Vegetables:

Optional. Include if you enjoy them and digest them well.

Hybrid Carbohydrate Strategy

(Strict for 14 Days)

For these fourteen days, clean carbohydrates are only eaten around training.

This improves:

- Energy control
- Fat loss
- Clarity and focus
- Better digestion
- Recovery and performance

Training carb options:

Potatoes

White rice

Honey

Fruit (banana, berries, pineapple)

After the challenge, flexibility increases inside the 6-Week Blueprint.

Your Daily Nutrition Rhythm

Below is an example of a simple HABPS daily rhythm.

Follow this pattern or customise your day using the Meal Builder on the next page.

Morning Eggs + avocado + ghee coffee Salt + water before anything else						
	Pre-Workout FocusFuel + salt + water Add fruit or honey if needed					
		Intra-Workout Water + electrolytes				
			Post-Shake Whey + honey or banana			
				Post-Workout Meal Protein + clean carbs Example: Beef with rice or potato		
					Evening Meal Protein + fats Example: Salmon + avocado + optional greens	

Meal Builder

Every meal follows a simple structure.

1. Protein (base)

Beef, chicken, eggs,
seafood, pork, lamb

2. Healthy fats

Butter, ghee, coconut oil,
cheese, avocado, egg yolks

3. Carbohydrates

Fruit daily
Clean carbs only
post training

4. Optional extras

Salt, herbs, spices,
bone broth

Meal Builder

Every meal follows a simple structure.

Example Meals

Breakfast Options:

- Eggs cooked in butter + avocado
- Cottage cheese + berries
- Greek yoghurt + honey (on training days)

Lunch/Dinner Options:

- Beef mince + avocado
- Chicken thighs + butter cooked greens
- Steak + fruit
- Salmon + cucumber + avocado

Training Day Meals:

- Beef + rice
- Chicken + potato
- Whey + honey immediately post workout

Hydration & Electrolytes

Hydration is a core part of HABPS.

Daily targets:

- 2–3 litres water
- Add salt to morning water
- Electrolytes during training
- Avoid sugary sports drinks

Why salt matters:

- Better focus
- Better pump
- Better energy
- Less fatigue

Supplements (Optional)

Supplements support consistency, not replace food.

Recommended:

- Electrolytes
- Whey protein
- FocusFuel (pre-workout)
- Creatine (optional)
- Magnesium at night

All optional. Not required to succeed.
