onboarding/ — Founding-partner onboarding flow

→ The canonical map is `PARTNER_JOURNEY.md`: the actual end-to-end process, first contact → live & running, with current-state reality flagged.

The path a founding partner walks from signed to launched: **IP extraction → build → launch**.

This folder holds the founding-ten-specific onboarding arc. The reusable pieces already exist elsewhere — link, don't duplicate:

- **IP extraction (Stage 00)** — `../../04_CLIENT_LIFECYCLE/00_ip_extraction/` (for partners without a locked method; the Pause/Reflect/Document model).
- **Onboarding checklist / access setup / kickoff** — `../../04_CLIENT_LIFECYCLE/04_onboarding/`.
- **Build stages** — `../../04_CLIENT_LIFECYCLE/05_build/`.
- **Launch** — `../../04_CLIENT_LIFECYCLE/06_launch/`.

What's missing and belongs here later: the **powered-platform-specific** onboarding (modality selection, white-label branding intake, scorecard setup, doctrine A-now confirmation) — i.e. the steps unique to spinning up a tenant on the engine, not the generic agency lifecycle.
